

Science paper class 7th

Q1 The enzymes that digest fats are known as

- A. lipase
- B. trypsin
- C. maltase
- D. fatase

Answer: A

Q2 If the mass of protons and neutrons is 1, then the mass of electron is

- A. 2
- B. 2-Jan
- C. 4-Jan
- D. 1/1890

Answer: D

Q3 More dense the object

- A. less the light refracts
- B. less the light reflects
- C. more the light refracts
- D. more the light reflects

Answer: C

Q4 In a circuit when an electric current flows in a continuous path, it is called

- A. close circuit
- B. open circuit
- C. hot circuit
- D. blocked circuit

Answer: A

Q5 The person who first arranged elements in form of periodic table was

- A. Lewis
- B. Mendeleev
- C. Thomas
- D. Darwin

Answer: B

Q6 Small creatures that breakdown decayed matter into further smaller pieces are called

- A. scavengers
- B. detritivores
- C. primary consumers
- D. primary producers

Answer: B

Q7 Majority of the people wear white or light colored clothes in summer, because light colors

- A. s
- B. reflect less heat
- C. reflect more heat
- D. transfer less heat

Answer: C

Q8 The heart is also called

- A. muscular pump
- B. pumping device
- C. pumping machine
- D. pumping muscle

Answer: C

Q9 Polar ice caps are found near the

- A. East and West poles
- B. East and North poles
- C. North and South poles
- D. West and South poles

Answer- C

Q10 Name of the American space probe is

- A. Ulysses
- B. Helios A
- C. Helios B
- D. Genesis

Answer: A
